Group #: ___   Group Member: _____

YES	NO	FORMS: _____
		The form is designed for a novice, non-technical user.
		The forms allow for searching, inserting, modifying and deleting the data in the database.
		Form controls, such as combo boxes and check boxes, are used where appropriate.
		Combo/list boxes are sorted and display meaningful fields to the user.
		The forms should allow for multiple entries to be manipulated before closing the form.
		The values of all fields on the form are validated for integrity.
		There should not be excessive Access warning messages.
		The implementation should provide readable messages instead of allowing cryptic Access messages.
COMMENTS:		

YES	NO	REPORTS: _____
		The report is correct.
		The report is easy to read, including appropriate page breaks, page numbering, sorting, and date.
		The parameter values for parameterized reports are validated for integrity.
		Reports are brought up in Preview mode by default.
		The test data illustrates all features of the report.
COMMENTS:		

YES	NO	QUERIES: _____
		The query is correct.
		The parameter values for parameterized queries are validated for integrity.
		The query results are sorted on a meaningful field.
		The test data illustrates all features of the query.
