Preface	xi
Part I Distributed Service-Oriented Software Development and Web Data Management...		1
Chapter 1 Introduction to Distributed Service-Oriented Computing	3
1.1	Computer Architecture and Computing Paradigms	3
1.1.1	Computer Architecture	3
1.1.2	Software Architecture.....	4
1.1.3	Computing Paradigms	4
1.2	Distributed Computing and Distributed Software Architecture.....	7
1.2.1	Distributed Computing	7
1.2.2	N-Tier Architecture	8
1.2.3	Distributed Object Architecture.....	10
1.3	Service-Oriented Architecture and Computing.....	12
1.3.1	Basic Concepts and Terminologies	12
1.3.2	Service-Oriented Computing.....	15
1.3.3	Object-Oriented Computing versus Service-Oriented Computing	17
1.3.4	Service-Oriented System Engineering.....	18
1.4	Service-Oriented Software Development and Applications	20
1.4.1	Traditional Software Development Processes	20
1.4.2	Service-Oriented Software Development	20
1.4.3	Applications of Service-Oriented Computing	24
1.4.4	Web Application Composition	25
1.5	Enterprise Software Development	27
1.6	Discussions	30
1.7	Exercises and Projects.....	35
Chapter 2 Distributed Computing with Multithreading	41
2.1	Introduction to C# and .Net.....	41
2.1.1	Getting Started with C# and .Net.....	41
2.1.2	Comparison between C++ and C#.....	43
2.1.3	Namespaces and the “using,, Directive	44
2.1.4	Class and Object in C#	46
2.1.5	Parameters: Passing by Reference with ref & out	49
2.1.6	Base Class and Base Calling Class Constructor	49
2.1.7	Constructor, Destructor, and Garbage Collection.....	50
2.1.8	Pointers in C#.....	50
2.1.9	C# Unified Type System	51

2.2	Memory Management and Garbage Collection	52
2.2.1	Static Variables and Static Methods	53
2.2.2	Runtime Stack for Local Variables	53
2.2.3	Heap for Dynamic Memory Allocation.....	55
2.2.4	Scope and Garbage Collection	56
2.3	General Issues in Multitasking and Multithreading	57
2.3.1	Basic Requirements	57
2.3.2	Critical Operations and Synchronization.....	57
2.3.3	Deadlock and Deadlock Resolving.....	60
2.3.4	Order of Execution	61
2.3.5	Operating System Support for Multitasking and Multithreading	61
2.4	Multithreading in Java	63
2.4.1	Creating and Starting Threads	63
2.4.2	Thread Synchronization.....	67
2.4.3	Synchronized Method.....	67
2.4.4	Synchronized Statements.....	71
2.5	Multithreading in C#.....	72
2.5.1	Thread Classes and Properties.....	72
2.5.2	Monitor.....	73
2.5.3	Reader and Writer Locks.....	82
2.5.4	Mutexes	86
2.5.5	Semaphore	86
2.5.6	Coordination Event.....	87
2.6	Exception Handling and Event-Driven Programming	89
2.6.1	Exception Handling	89
2.6.2	Event-Driven Programming	93
2.6.3	Case Study: An Electronic Commerce Application in Event-Driven Approach	99
2.7	Multithreading Performance	104
2.7.1	Amdahl's Law	104
2.7.2	Multithreading Experiments	105
2.8	Discussions	110
2.9	Exercises and Projects.....	111
Chapter 3 Essentials in Service-Oriented Software Development		121
3.1	Service-Oriented Software Development Environments	121
3.1.1	Overview	121
3.1.2	Windows Communication Foundation.....	123
3.1.3	Service Interface: Address, Binding, and Contract.....	124
3.2	Service Provider: Creating and Hosting Services	125
3.2.1	Getting Started with Developing WCF Services	126
3.2.2	Testing Web Services	129
3.2.3	File Service and Data Management.....	132
3.2.4	Hosting Your Web Services as a Service Provider.....	133
3.2.5	Source Code Deployment and Precompiled Code Deployment	135
3.3	Service Brokers: Publishing and Discovering Services	138
3.3.1	An Ideal Service Broker with All Desired Features	138
3.3.2	UDDI Service Registry.....	141
3.3.3	ebXML Service Registry and Repository.....	148
3.3.4	Ad Hoc Registry Lists	150

3.4	SOAP and HTTP.....	150
3.4.1	SOAP Format	150
3.4.2	HTTP	151
3.4.3	SOAP Over HTTP.....	152
3.5	WSDL: Web Services Description Language.....	154
3.5.1	Elements of WSDL Documents	154
3.5.2	WSDL Document Example	155
3.6	Service Requesters: Building Applications Using Services.....	157
3.6.1	Connecting Endpoint and Proxy	157
3.6.2	Creating a Windows Forms Application in ASP.Net	158
3.6.3	Developing a Web Site Application to Consume WCF Services	162
3.6.4	Consuming Services in Different Platform.....	166
3.7	Web Service Testing and Dynamic Service Invocation.....	167
3.7.1	Get Web Content from URL	167
3.7.2	Analyze WSDL Document.....	168
3.7.3	Test Web Service.....	169
3.7.4	Dynamic Web Services and Web Applications.....	169
3.8	Java-Based Web Service Development	169
3.8.1	Web Application Building Using AJAX Programming	169
3.8.2	Java-Based Web Service Development and Hosting.....	171
3.9	Discussions	174
3.10	Exercises and Projects.....	175
Chapter 4 XML Data Representation and Processing.....		181
4.1	XML Fundamentals	181
4.1.1	XML versus HTML.....	182
4.1.2	XML Syntax	183
4.1.3	XML Namespaces	186
4.2	XML Data Processing.....	187
4.2.1	DOM: Document Object Model.....	187
4.2.2	SAX: Simple API for XML.....	189
4.2.3	XML Text Writer	191
4.2.4	XML Processing in Java.....	192
4.3	XPath.....	193
4.4	XML Type Definition Languages.....	196
4.4.1	XML Document Type Definition (DTD)	196
4.4.2	XML Schema	199
4.4.3	Namespace	201
4.4.4	XML Validation	203
4.5	Extensible Stylesheet Language.....	205
4.6	Other Web Data Formats	209
4.6.1	XHTML.....	210
4.6.2	RSS.....	212
4.6.3	Atom.....	214
4.6.4	JSON	216
4.6.5	Google Protocol Buffers and BigTable	217
4.7	Discussions	218

4.8	Exercises and Projects.....	219
Chapter 5 Web Application and State Management.....		225
5.1	Models of Web Applications	225
5.1.1	Pure HTML-Based Web Application	225
5.1.2	Client-Side Scripting	226
5.1.3	Server-Side Scripting and Code-Behind Page Computing	227
5.1.4	Client-Side Out-Of-Browser Computing.....	228
5.2	Structure of Web Applications.....	229
5.2.1	Components of Web Applications.....	229
5.2.2	Server Controls.....	231
5.2.3	User Controls.....	235
5.2.4	Web Application Configuration	237
5.2.5	Global Application Class.....	241
5.2.6	Dynamic Link Library	242
5.3	State Management.....	243
5.3.1	Overview of State Management Techniques	244
5.3.2	View State	244
5.3.3	Session State.....	246
5.3.4	Cookies.....	250
5.3.5	Session State and Cookies	251
5.3.6	Application State and Service Execution Model	252
5.4	Save User Data to Server File System	253
5.4.1	File System and Standard File Operations	253
5.4.2	Reading and Writing XML Files	254
5.5	Caching and Recommendation	258
5.5.1	Output Caching.....	259
5.5.2	Fragment Caching	260
5.5.3	Data Caching	261
5.6	Dynamic Graphics Design and Generation.....	268
5.6.1	Dynamic Graphics	268
5.6.2	Getting Started with Dynamic Graphics Generation	269
5.6.3	Generating Dynamic Graphics in User Control.....	272
5.7	Animation and Phone Application Development	276
5.7.1	Silverlight Applications.....	277
5.7.2	Developing Windows Phone Apps Using Silverlight.....	279
5.7.3	Android Phone App Development with App Inventor	287
5.8	Architecture Design	293
5.8.1	ASP .Net Forms-Centric Architecture.....	294
5.8.2	ASP .Net MVC Architecture	294
5.9	Discussions	296
5.10	Exercises and Projects.....	297
Chapter 6 Dependability of Service-Oriented Software.....		305
6.1	Basic Concepts.....	305
6.1.1	Dependability	305
6.1.2	Dependability Attributes and Quality of Service.....	306
6.1.3	Security Issues in SOA Software.....	307
6.2	Access Control in Web Applications	309

6.2.1	IIS and Windows-Based Security Mechanisms.....	310
6.2.2	Forms-Based Security	311
6.2.3	User Registration and Account Management	315
6.3	Encryption and Decryption	318
6.3.1	Developing Encryption and Decryption Service in WCF	318
6.3.2	Developing a Secure Hashing Service in WCF	320
6.3.3	WCF Service Client.....	322
6.3.4	Error Control Code.....	324
6.4	Dependable Computing in Windows Communication Foundation	326
6.4.1	WS-Security	326
6.4.2	WS-Reliability.....	327
6.4.3	Transactions	329
6.5	Discussions	331
6.6	Exercises and Projects.....	333
Part II Advanced Service-Oriented Computing and System Integration		337
Chapter 7 Advanced Services and Architecture-Driven Application Development		338
7.1	Self-Hosting Services.....	338
7.1.1	Developing a Service and a Hosting Service.....	338
7.1.2	Developing Clients to Consume Self-Hosting Services	342
7.2	Advanced WCF Services	346
7.2.1	Advanced Communication Models	346
7.2.2	Advanced Bindings	349
7.2.3	Service Behavior and State Management	350
7.3	REST Concept and RESTful Services	355
7.3.1	REST Concept and REST Architecture.....	355
7.3.2	RESTful Services	356
7.3.3	Developing RESTful Service	360
7.3.4	Developing an Image Verifier in RESTful Service	362
7.3.5	Consuming Simple RESTful Service	366
7.3.6	Google RESTful Services: Map Services.....	367
7.3.7	Making Asynchronous Calls to RESTful Services.....	370
7.3.8	RESTful Service-Based Web Application Description Language	371
7.4	Workflow Foundation.....	373
7.4.1	Architecture and Components	373
7.4.2	Creating a WF Flowchart Application.....	375
7.4.3	Creating Custom Code Activity for Workflow Application.....	377
7.4.4	Implementing Finite State Machine in Workflow	380
7.4.5	Creating Workflow Service	381
7.5	Discussions	390
7.6	Exercises and Projects.....	391
Chapter 8 Enterprise Software Development and Integration		397
8.1	Overview of Composition Languages.....	397
8.2	BPEL.....	400
8.2.1	BPEL Activities and Constructs.....	400
8.2.2	BPEL Process.....	400

8.2.3	WSDL Interface Definition of BPEL Process	403
8.2.4	BPEL Process	405
8.2.5	An Example Invoking Real Web Services	407
8.3	Stateless versus Stateful Web Services	413
8.3.1	BizTalk's Singleton Object Approach.....	414
8.3.2	BPEL's Correlation Approach	414
8.4	Frameworks Supporting BPEL Composition.....	417
8.4.1	Oracle SOA Suite	417
8.4.2	ActiveBPEL	419
8.4.3	BizTalk.....	420
8.4.4	Simple Workflow Service	421
8.5	Message-Based Integration	422
8.5.1	Java Message Service	423
8.5.2	Microsoft Message Queue	424
8.5.3	Database-Supported Messaging	426
8.5.4	Email Supported Messaging.....	427
8.5.5	Enterprise Service Bus	428
8.6	Mashup for Web Application Integration	428
8.7	Other Composition Languages.....	432
8.7.1	SCA/SDO	432
8.7.2	WSFL: Web Services Flow Language	433
8.8	Discussions	434
8.9	Exercises and Projects.....	435
Chapter 9 Internet of Things and Robot as a Service		441
9.1	Introduction.....	441
9.1.1	Internet of Things	441
9.1.2	Service-Oriented Robotics Computing.....	443
9.1.3	Event-Driven Robotics Applications.....	444
9.2	Robot as a Service.....	447
9.2.1	Robot as a Service Definition.....	447
9.2.2	Robot as a Service Design.....	448
9.2.3	Robot as a Service Implementation	450
9.3	Robotics Developer Studio and Visual Programming Language.....	452
9.4	Simulating an ALU Using VPL	455
9.4.1	Logic Design of an Arithmetic and Logic Unit	456
9.4.2	Creating VPL Activities	456
9.4.3	VPL Diagram and Testing.....	458
9.5	Finite State Machine and VPL Diagram	461
9.6	Developing Service-Oriented Robotics Applications	466
9.6.1	Service Repository in Robotics Developer Studio	466
9.6.2	Sensor Service	467
9.6.3	Maze Navigation Algorithms	468
9.6.4	Implementing a Heuristic Maze Navigation Algorithm	468
9.6.5	Implementing a Wall-Following Maze Navigation Algorithm	475
9.7	Using Visual Programming Language in Other Platforms	477
9.8	ASU-VPL: A New Visual Programming Language	479

9.8.1	ASU-VPL versus Microsoft VPL.....	480
9.8.2	Drive-by-wire in ASU-VPL	482
9.8.2	Line-follower in ASU-VPL	485
9.8.3	Wall-following maze navigation in ASU-VPL	486
9.8.4	Other Platforms supported by ASU-VPL	487
9.9	Discussions	491
9.10	Exercises and Projects.....	493
Chapter 10 Interfacing Service-Oriented Software with Databases		497
10.1	Databases in Service-Oriented Software.....	497
10.2	Relational Databases in Service-Oriented Software	498
10.2.1	Interface between Database and Software	498
10.2.2	SQL Database in ADO .Net	500
10.2.3	DataAdapter and DataSet in ADO .Net.....	506
10.2.4	WCF RIA Service	508
10.3	LINQ, Language Integrated Query	509
10.3.1	What is the Purpose of LINQ?	510
10.3.2	Lambda Expressions.....	511
10.3.3	LINQ to Object.....	514
10.3.4	LINQ to SQL.....	516
10.3.5	LINQ to XML	519
10.4	XML-Based Database and Query Language XQuery.....	522
10.4.1	Expressing Queries.....	522
10.4.2	Transforming XML Document.....	524
10.4.3	XQuery Discussions	525
10.5	Discussions	526
10.6	Exercises and Projects.....	527
Chapter 11 Big Data and Ontology Systems		531
11.1	Big Data Systems	531
11.2	Big Data Management	533
11.3	Big Data Processing and Analytics	534
11.3.1	Map and Reduce	534
11.3.2	Hadoop and Cassandra	535
11.3.3	Apache Pig	540
11.3.4	Big Data Analytics	540
11.4	Big Data Applications and Case Studies.....	542
11.4.1	Big Data Applications in different domains	542
11.4.2	Network traffic monitoring.....	543
11.4.3	Recommender System	545
11.5	Semantic Web and Ontology	549
11.5.1	Ontology Language RDF	550
11.5.2	RDF Schema	552
11.5.3	Reasoning and Verification in Ontology	558
11.5.4	Web Ontology Language OWL.....	559
11.5.5	OWL-S and Semantic Web Services.....	563
11.5.6	Linked Data	564
11.5.7	Ontology Development Environments	565

11.6	Discussions	566
11.7	Exercises and Projects.....	569
Chapter 12 Service-Oriented Application Architecture		573
12.1	Introduction.....	573
12.2	Application Architectures	575
12.2.1	Dynamic Architecture via Dynamic Composition.....	576
12.2.2	Dynamic Recomposition	577
12.2.3	Lifecycle Management Embedded in Operation Infrastructure.....	578
12.3	Examples of Service-Oriented Application Architectures	580
12.3.1	IBM WebSphere Architecture	580
12.3.2	Enterprise Service Bus	581
12.3.3	SAP NetWeaver	582
12.3.4	User-Centric Service Oriented Architecture.....	584
12.4	Discussions	585
12.5	Exercises and Projects.....	587
Chapter 13 A Mini Walkthrough of Service-Oriented Software Development.....		591
13.1	Introduction.....	591
13.2	Sample Domain Model	595
13.2.1	Ontology Systems.....	595
13.2.2	Published Services.....	599
13.2.3	Published Workflows	602
13.2.4	Shipping Domain Collaboration Templates	603
13.3	Specific Requirements for a Project.....	605
13.4	A Working Example	607
13.5	Discussions	614
13.6	Exercises and Projects.....	617
Chapter 14 Cloud Computing and Software as a Service.....		619
14.1	Introduction.....	619
14.2	SaaS Maturity Model	622
14.3	Database Design for Multi-Tenancy SaaS	624
14.3.1	Resource Isolation Patterns	625
14.3.2	Security.....	628
14.3.3	Scalability.....	630
14.4	Google App Engine.....	630
14.4.1	Services	631
14.4.2	Datastore.....	632
14.4.3	Hints for Developing Scalable Applications	632
14.4.4	Development and Tooling	633
14.4.5	Other Constraints.....	633
14.5	Google File System.....	633
14.5.1	GFS System Structure and Operations	634
14.5.2	Lessons Learned from Developing GFS	635
14.5.3	Other Similar Projects	636

14.6	BigTable.....	636
14.6.1	Major Components	637
14.6.2	BigTable Overview	637
14.7	MapReduce	643
14.7.1	MapReduce Programming Model	643
14.7.2	Example.....	644
14.7.3	Applications	644
14.7.4	Execution Overview	645
14.7.5	Task Granularity and Fault-Tolerant Computing	645
14.8	Hadoop.....	646
14.8.1	Hadoop Ecosystem	646
14.8.2	Hadoop HDFS and MapReduce	646
14.8.3	Example.....	647
14.9	Microsoft Azure	648
14.9.1	Azure Architecture	649
14.9.2	Azure Elements	650
14.9.3	Creating Your First Application Azure Cloud.....	651
14.10	Salesforce.com	652
14.11	Cloud Computing Algorithms.....	658
14.12	Applications of Data Differencer	669
14.13	Discussions	670
14.14	Exercises and Projects.....	671

Part III Appendices: Tutorials on Service-Oriented Software Development 673

Appendix A Web Application Development..... 675

A.1	Design of Graphical User Interface.....	675
A.2	Discovering Web Services Available Online.....	680
A.3	Access Web Services in Your Program: ImageService	682
A.4	Access Web services in Your Program: Weather Forecasting Service.....	686
A.5	Access Web Services in Your Program: USZip Service.....	688
A.6	Creating ASP .Net Web Services.....	690
A.7	Exercises and Projects.....	693

Appendix B Service-Oriented Robotics Applications..... 697

B.1	Getting Started with Robotics Developer Studio and VPL.....	697
B.2	Programming Conditions in VPL	699
B.3	Programming Loop in VPL.....	700
B.4	Programming a Robot in a Simulation Environment.....	700
B.5	Programming the Robot to Traverse a Maze	705
B.6	Deploying the Program to a Real Robot.....	706

B.7	Programming the Arm of the Robot	707
B.8	Autonomous Robot in an Obstacle Course	709
B.9	Exercises and Projects.....	715
Appendix C	ASU Repository of Services and Applications.....	717
References	723
Index	731

Preface

Web software development and cloud computing, which are based on Service-Oriented Architecture (SOA), Service-Oriented Computing (SOC), and Service-Oriented Development (SOD), represent the modern software engineering theory, practices, and technologies. The availability and unification of computing capacities and data resources are reshaping the world. The latest wonder of technology is the Big Data. The amount of the data is not the key. The relationship among all data is the key. Finding the connections of all related data and making use of the connections to make decisions become possible after the maturity of cloud computing and related data management technologies.

The text takes a comprehensive and coherent approach to study the latest distributed and service-oriented architecture, distributed computing paradigm, and distributed software development and integration technologies. The goal is to learn the concepts, principles, methods, development frameworks, and their applications. The methodology is learning by developing examples. In the service development part, we assume that students have good knowledge in object-oriented computing. Students learn to build services through class definition, interface specification, the association between class methods and service operations, service deployment and service hosting. In the software integration part, we assume that students have basic understanding of software architecture. We take an architecture-driven approach to help students creating the working solution step by step from their architecture design. The first step is to design the architecture, which includes the major components and the interconnection. The next step is to define the interfaces among the components using the standard data types. Finally, the behavior of each component is linked to remote service or local object. The elaborated architecture is automatically translated into the executable.

The text consists of 14 chapters and 3 appendices, which are organized into three parts.

Part I: Distributed Service-Oriented Software Development and Web Data Management

Chapter 1	Introduction to Distributed Service-Oriented Computing
Chapter 2	Distributed Computing with Multithreading
Chapter 3	Essentials in Service-Oriented Software Development
Chapter 4	XML Data Representation and Processing
Chapter 5	Web Application and State Management
Chapter 6	Dependability of Service-Oriented Software

Part II: Advanced Service-Oriented Computing and System Integration

Chapter 7	Advanced Services and Architecture-Driven Application Development
Chapter 8	Enterprise Software Development and Integration
Chapter 9	Internet of Things and Robot as a Service
Chapter 10	Interfacing Service-Oriented Software with Databases

Chapter 11	Big Data and Ontology Systems
Chapter 12	Service-Oriented Application Architecture
Chapter 13	A Mini Walkthrough of Service-Oriented Software Development
Chapter 14	Cloud Computing and Software as a Service

Part III: Appendices: Tutorials on Service-Oriented Software Development

Appendix A	Web Application Development
Appendix B	Service-Oriented Robotics Applications
Appendix C	ASU Repository of Services and Applications

Part I includes the first six chapters, which can be used for a service-oriented computing and distributed software development course at the senior level or graduate level of universities. This part emphasizes the computing paradigm, data representation, state management, and programming language-based SOC software development. It introduces fundamental concepts and principles, in addition to technologies and tools, which are not being taught in traditional software engineering courses.

Chapter 1 gives an overview and explains fundamental concepts of distributed software architecture, design patterns, distributed computing, service-oriented architecture, and enterprise software architecture. The connections and distinctions between object orientation and service orientation are discussed in detail.

Chapter 2 studies parallel computing in multithreading. It discusses threading, synchronization, coordination, event-driven programming, and performance of parallel computing under multicore computers.

Chapter 3 introduces the essential concepts and techniques in service-oriented architecture, particularly the three-party model of service-oriented software development: Service providers, service brokers, and service consumers. Service interfaces, service communication protocols, and service hosting are keys for supporting this new computing paradigm.

Chapter 4 discusses XML and related technologies, which are used in almost everywhere in service oriented software development. XML is used for representing data, interface, standards, protocols, and even the execution process definition. This chapter studies not only XML representations, but also XML processing and transforming.

Chapter 5 is a long chapter and comprises application logic, data and state management, and presentation design. It involves application building based on architecture design using existing services and components, stateful Web application development using different state management techniques, including view state, session state, application state, file management, and Web caching. At the presentation layer, it discusses dynamic graphics generation, animation, and phone app development.

Chapter 6 deals with the dependability issues in Web-based applications, including access control through Forms security, encryption and decryption applications, and Secure Sockets Layer in Web communication. The chapter also discusses the reliability issues in Web application design and particularly in Web communication.

Part II includes the next eight chapters. These chapters are built on the basic concepts and principles discussed in Part I, yet they do not rely on the details of the first six chapters. This part emphasizes software composition and integration using existing services and components. The approach is based on architecture-driven approach, higher-level of data management, and message-based integration.

Chapter 7 starts with reviewing service-oriented computing and service development covered in Part I. Then the chapter moves to discuss more advanced service development that supports asynchronous communications. It also presents more detail in RESTful service development that has been briefly

discussed in Part I. Finally, the chapter moves to Workflow Foundation that supports architecture-driven software development. It uses examples and case studies to demonstrate software development by drawing the flowchart consisting of blocks of services and local components, adding inputs/outputs to the blocks, and then compiling the flowchart into executable.

Chapter 8 further discusses flowchart-based and architecture-driven software development by using other process languages and development environments. It starts with BPEL (Business Process Execution Language) and BPEL-based development environments. Then the discussion is extended into message-based software integration, Enterprise Service Bus, and Mashup tools for integrating Web contents.

Chapter 9 extends Web-based computing to Internet of Things and Robot as a Service (RaaS). As an example, robotics applications are studied in detail, which use the service-oriented Visual Programming Language (VPL) from Microsoft to develop robotics services and applications. A new visual programming environment, ASU-VPL, is introduced, which can be used as a follow-up language of Microsoft VPL. Full programming examples in ASU-VPL and hardware platforms supported are given.

Chapter 10 is on service-oriented database management, which focuses the interface between service-oriented software and relational database, XML database, and LINQ (Language Integrated Query) and using LINQ to access object, relational database, and XML database. LINQ is the focus of the chapter.

Chapter 11 studies the major issues in big data, including big data infrastructure, big data management, big data analytics, and big data applications. The relationship between big data and cloud computing is discussed. Ontology is presented as a part of big data representation and big data processing techniques.

Chapter 12 focuses on the application layer of service-oriented computing systems. It compares and contrasts the architectures and features of a few major enterprise software systems.

Chapter 13 offers a full case study on service-oriented software development.

Chapter 14 dedicates to cloud computing, which introduces the most recent trend in cloud computing and data centers. It covers multi-tenancy architecture, Web databases and file systems, scheduling, and fault-tolerant techniques in cloud computing and in real-time computing. It also presents cloud computing platforms and development environments from Google, Microsoft, and Salesforce.com. Software as a Service is the focus of the chapter.

Part III has three appendices that supplement and support the contents on Web application development and service-oriented robotics application development.

Appendices A and B contain tutorial-based materials that provide stepwise instructions, without missing pieces, to build working applications from scratch. These tutorials and exercises can help students to learn concepts by examples. This part, in conjunction with Chapter 9, can also be used for a freshman level course to introduce computing concepts through robotics programming and Web application programming.

Appendix C is the entrance to ASU Repository of Services and Applications. It lists and explains some of the deployed examples and URLs of SOAP services, RESTful services, Web applications, and other resources used in this text. Free services found on Internet come and go without any guarantee on quality of service. The repository provides a stable resource for teaching from this book without worrying about the availability and performance of the free services found on Internet. ASU Repository of Services and Applications is open to public and can be accessed at the link: <http://venus.eas.asu.edu/WSRepository/>

The book embraces extensive contents. It can be used in multiple courses. At Arizona State University, we use the book as the text for two major courses. The first course is CSE445/598 (Distributed Software Development), where the CSE445 session is for seniors and the CSE598 session is for graduate students. The course started in Fall 2006, and first edition of the book was developed for this course in 2008. Now the contents in Part I of this text are used for this course.

A second course CSE446/598 (Software Integration and Engineering) was piloted in 2010 and 2011, and then the course becomes a regular course in 2012. Part II of this text is used for this course.

Both CSE445 and CSE446 are required courses of the Software Engineering Concentration in the Computer Science program at Arizona State University.

The following table illustrates the lectures of CSE445/598 and CSE446/598. Each lecture is 75-min long and counts as 1.5 lecture hours. Each course is completed in about 44 lecture hours.

CSE445/598 Lecture by Lecture Contents	CSE446/598 Lecture by Lecture Contents
 L01 - 1. Intro to Computing	 Unit 1-1 Introduction
 L02 - 1. Intro to Distributed Architecture	 Unit 1-2 Web Data and Standards
 L03 - 1. Intro to SOC Concepts	 Unit 1-3 Self Hosting Service
 L04 - 1. Intro to SOC Development	 Unit 1-4 Advanced WCF Service
 L05 - 2. Multithreading concepts	 Unit 1-5 RESTful Concepts
 L06 - 2. Multithreading in Java	 Unit 1-6 RESTful Services
 L07 - 2. Multithreading in C Sharp	 Unit 2-1 Enterprise Architecture and Process
 L08 - 2. Event-driven programming	 Unit 2-2 Workflow 1 Concepts
 L09 - 2. Threading-Multicore Performance	 Unit 2-3 Workflow 2 Case Studies
 L10 - 3. SOC Service Development	 Unit 2-4 BPEL 1 Process
 L11 - 3. SOC Hosting and Brokerage	 Unit 2-5 BPEL 2 Case Study
 L12 - 3. SOC Application Builder	 Unit 2-6 BPEL 3 State and Frameworks
 L13 - 3. SOC Development in Java	 Unit 2-7 Message-Based Integration
 L14 - 4. XML basics	 Unit 2-8 Mashup
 L15 - 4. XML processing	 Mid-Term Review
 L16 - 4. XML Schema	 Unit 3-1 Device Integration
 L17 - 4. XML Transformation	 Unit 3-2 Robotics Studio and VPL
 L18 - 5. Web Application Structure	 Unit 3-3 VPL Maze
 L19 - 5. Web Application Controls	 Unit 4-1 ADO
 L20 - 5. Config-Global-DLL-Cookies	 Unit 4-2 LINQ to Object
 L21 - 5. Session and File System	 Unit 4-3 LINQ to SQL
 L22 - 5. Web Caching	 Unit 4-4 LINQ to XML
 L23 - 6. Security-Reliability Concepts	 Unit 4-5 XML Database
 L24 - 6. Forms Security	 Unit 5-1 Big Data Concepts and Domains
 L25 - 6. Error Control and SSL	 Unit 5-2 Big Data Processing
 L26 - 6. Data Encryption-Hash-Reliable Msg	 Unit 5-3 Big Data App and RDF-RDFS
 L27 - 7. Dynamic Graphics - Animation	 Unit 5-4 OWL and Ontology Frameworks
 L28 - 7. Mobile Apps Development	 Unit 6-1 Cloud Computing
 L29 - 7. MVC Summary and Outlook	 Unit 6-2 Cloud Computing Case Studies

We recommend teaching the two courses in a sequence. However, the two courses can be taught independently without making one to be the prerequisite of the other. In this case, the basic concepts and principles from Part I, including those from a part of Chapter 1 and the first section of Chapter 4, should be reviewed or be assigned as reading materials for preparing the course using Part II.

We like to thank many of our sponsors, colleagues, and students in this project, particularly in preparing this edition of the book, including Prof. Xiaoying Bai of Tsinghua University, Prof. Farokh Bastani of University of Texas at Dallas, Mr. Calvin Cheng of Banner Health, Dr. J. Y. Chung of IBM, Prof. Zhongshi He of Chongqing University, Prof. Mei Hong of Shanghai Jiaotong University, Dr. K. W. Hwang of IBM, Prof. Zhi Jin of Peking University, Prof. Yingxu Lai of Beijing University of Technology, Prof. Y. H. Lee of Arizona State University, Prof. Yisheng Li of Fudan University, Prof. K. J. Lin of University of California at Irvine, Mr. John Oliver of Intel, Dr. Raymond Paul of DoD OSD NII, Profs. Qian Wang and Yongkang Xing of Chongqing University, Profs. Ruzhi Xu and Zhizheng Zhou of Qilu University of Technology, Prof. S. S. Yau of Arizona State University, and Prof. I-Ling Yen of University of Texas at Dallas. They contributed to our understanding of the materials. We also acknowledge the generous support from Intel, the U.S. Department of Education, the U.S. Department of Defense, and the National Science Foundation. Without their support, this book would not be possible. We also thank the teaching assistants and research assistants at Arizona State University. They validated many of the examples and assignments used in the book. We also thank the teaching assistants and research assistants at Arizona State University, including Calvin Cheng, Gennaro De Luca, Jay Elston, Qian Huang, Adam Lew, Wu Li, Gavin Liu, Mengxue Liu, Sheng Liu, Sami Mian, Xin Sun, Jingjing Xu, Xinyu Zhou, and Peide Zhong. They implemented and validated many of the examples and assignments used in the book. Finally, we would like to thank our families for their support and understanding of taking on such a project while carrying out a full research and teaching load at the university.

Note for Instructors

All the assignments and projects have been classroom-tested at Arizona State University. Furthermore, all the code presented in this book has been developed and tested. Contact the authors if you are interested in obtaining more materials in this book. Instructor-only resources, such as complete presentation slides, assignments, and tests, can be obtained by directly contacting the authors at yinong@asu.edu.

Part I

Distributed Service-Oriented Software

Development and Web Data Management

Chapter 1	Introduction to Distributed Service-Oriented Computing
Chapter 2	Distributed Computing with Multithreading
Chapter 3	Essentials in Service-Oriented Software Development
Chapter 4	XML Data Representation and Processing
Chapter 5	Web Application and State Management
Chapter 6	Dependability of Service-Oriented Software
