Summary: 513 papers, average cites per paper

over last 20 years: 71. H index 87

Complete Pub List 2 n

106. "Vibrational Bandshapes in Viscous Liquids and Glasses," C. A. Angell, text of an invited contribu-tion to the NATO Advanced Summer Institute published as Vibrational Spectroscopy in Molecular

127. "Diffusivity of the Hard-Sphere Model in the Region of Fluid Metastability," L. V.

Complete Pub List 2 n

Complete Pub List 2 n

Complete Pub List 2n

272. "An ac Technique for Simultaneous Study of Local and Global Linear Responses Near the Glass Transition: the Case of Doped Ca++/K+/NO3-," R.

Complete Pub List 2 n

311. "Vibrational anharmonicity and the glass transition in strong and fragile vitreous polymorphs," J. Shao and C.A. Angell,

Complete Pub List 2 n

369. "10 questions on glassformers, and a real space 'excitations' model with some

428. ACS (NewYork) Abstract: Ionic liquids by proton transfer, delta PKA, and the
ionic liquid fuel cell Yoshizawa M, Belieres JP, Xu W, Angell CA

ABSTRACTS OF PAPERS OF THE AMERICAN CHEMICAL SOCIETY
226: U627-U627 083-IEC Part 1 SEP 2003

2n

440. Two-Gaussian excitations model for the glass transition

442. “Structural Relaxation in the glass transition region of water”, Nicolas Giovambattista, C. Austen Angell,

443. “Highly decoupled ionic and protonic solid electrolyte systems, in relation to other relaxing systems and their energy landscapes”*, F. Mizuno*, J.-P Belieres*, N. Kuwata$$, A. Pradel@, M. Ribes@, and C. A. Angell*

Complete Pub List 2 n

456. Parallel developments in inorganic, aprotic, and protic ionic liquids: physical chemistry and applications” C. Austen Angell, Nolene Byrne and Jean-Philippe Belieres, Accounts of Chemical Research (special issue), 40, 1228-1236, (2007)

457. Directed destabilization of lysozyme in protic ionic liquids revelas a new low energy reversibly unfolding (pre-fibril)

Complete Pub List 2 n

472 “Doped Sulfone electrolytes for high voltage Li-ion cell applications.” Xiaoguang Sun and C. Austen Angell” Electrochemistry Commun. 11 (2009) 1418–142

478 Glass transition and fragility in the simple molecular glassformer CS2 from CS2-S2Cl2 solution studies. Zuofeng Zhao, Complete Pub List 2 n

480. Glass transition with decreasing correlation length during cooling of Fe50Co50 superlattice and strong liquids. Shuai Wei, Isabella Gallino, Ralf Busch & C. Austen Angell, Nature Physics, 7, 178-182 (2011) (online Nov. 28 (DOI:10.1038/NPHYS1823 (2010))

488. High conductivity, and “dry” proton motion, in guanidinium salt melts and binary solutions.

Complete Pub List 2 n

508. Enhanced Performance of sulfone, and sulfone-containing, solvents at lithium ion battery electrodes, including the LiNiMnO high voltage cathode, Leigang Xue, Kazuhide Ueno, S.-Y. Lee, C. Austen Angell, J. Power Sources, 262, 123-128, 2014.

Spectroscopic evidence for a first order liquid-liquid transition to an LDA water-like phase in the supercooling of water-rich ideal aqueous solutions, Sander Woutersen*, Michiel Hilbers’ Zuofeng Zhao, and C. Austen Angell* Nature (under review)

DOI: 10.1021/jacs.6b01203

A. ELECTROLYTES AND BATTERY COMPONENTS

B. GLASSES

C. OTHER

PROVISIONAL PATENTS

1. M12-158P (22193-0086P02)
   ANHYDROUS PHOSPHORIC ACID DERIVATIVE, Charles Austen Angell,

Younes Ansari and Telpriore Greg Tucker (submission date 7-31-12).

2. M12-158P (22193-0086P02)
   INORGANIC PLASTIC CRYSTAL ELECTROLYTES, C. Austen. Angell, Iolanda Santana Klein, Tel Greg Tucker.
