

USING PHYSICS LABS SOFTWARE ON CAMPUS COMPUTING NETWORK

1. Logon with your ASURITE id and PASSWORD.

2. Go to:

START / PROGRAMS / INSTRUCTOR VOLUMES / IV MOUNT.

Enter class name as: phy100.

The class folder will be mounted on the U: drive of your computer.

3. Open: MY COMPUTER / ivU:...

The folder phy100 contains the lab programs: Science Workshop (SW), Data Studio, and Graphical Analysis (GA).

Data Studio has a setup routine that must be run before running the program, otherwise you get the license/product key window. After mounting and opening up the U: drive double-click the "DataStudio Setup" shortcut. The setup script runs and says at the end, "An icon to start DataStudio is now available on the desktop". Press any key to exit the script and go to the desktop to find the shortcut to launch DataStudio.

Science Workshop (sciwkshp.exe) wants an input device but will time out after checking through all devices and you can continue without an input device.

4. Save your work to HD or floppy. You cannot save anything to the Instructor Volume.

5. Remember to logoff properly.
