6.11

Summary of the innervation of the muscles of the upper limb

A. Median and musculocutaneous nerves. The average levels at which the motor branches leave the stems of the main nerves are shown.

B. Ulnar nerve. The average levels of origin of the motor branches are shown. There are no fleshy muscle fibers on the dorsum of the hand, and therefore, there are no motor nerves.

6.11
Summary of the innervation of the muscles of the upper limb (continued)

C. Medial and lateral pectoral nerves. D. Radial nerve.
