Course Outline: We will run two threads concurrently through the semester. One of them ("Lectures") fills the background knowledge on fluid mechanics and numerical methods. The other ("Projects") focuses on the execution and analysis of specific projects using Ansys-Fluent.

I. Lectures
   1. Survey of basic fluid mechanics and thermodynamics as preparation for the projects (4 weeks)
   2. Survey of numerical methods for deepening the understanding of the functionality of Ansys-Fluent or similar industrial software (6 weeks)
   3. Discussion on general methods for analyzing fluid systems (3 weeks)

II. Projects
   1. Tutorials for Ansys-Fluent (2 weeks)
   2. Main projects (12 weeks)
      At least four of the following projects (3 weeks each) will be chosen for this semester. The list is tentative and the detail of the individual project is subject to further adjustments.
      Project 1: Fluid system with heat transfer
      Project 2: External flow (calculation of drag and lift; Reynolds number dependence)
      Project 3: Compressible flow system
      Project 4: Low Reynolds number flow; Microfluidics
      Project 5: Moving boundary and moving grid
      Project 6: Flow with an interface (two-phase or multi-phase)
   The required work for the projects will be different for participants of MAE598 and MAE494. Details will be given in the individual assignments.

Textbook: No required textbook. Instructor will provide tutorials, slides, and lecture notes as needed.

Attendance is mandatory for this class. Excessive absence without a proper reason may result in a failing grade.

Grade: Projects & homework 90% (regular tasks = 75%, credit from bonus pool = 15%) 
Audit of work (in-class test) 10%
Specific rules concerning collaboration for projects will be released along with the release of each individual project.
