ASSIGNMENT #9: INTERVIEW DESIGN

Working in teams of three:

· Identify a problem that you can assess through a twelve-question interview using a local population for your sample. (Examples of local populations might include students in a lower division class, people at the local coffee shop, dorm residents, street people under the Mill Avenue bridge [well, be careful about this choice], etc).

· Develop twelve questions with appropriate “probes” to address your focus issue.

· Test the questions/method on two people in another class or other graduate or undergraduate students.

· Collect data from your local population. Keep the sample very small ten people or less!

· "Analyze" the data -- what does it mean? Also be prepared to discuss “how” you analyzed the data.

·
