PEER-REVIEWED PUBLICATIONS

Figure 2. Size of bubble indicates number of papers published in that domain. Bubbles are plotted according to funding levels that supported the work as well as average impact factor of journal homes.

Notes:

In Nutrition and related fields, authors are listed in decreasing order of contribution, and the following norms apply:

- The first author is usually the person who conducted the project and wrote the main contents of the manuscript.
- The senior author, or principal investigator who secured funding for the work, is usually listed as last author, unless he/she wrote the main manuscript content. This person is usually the corresponding author.

Annotations for individual citations:

- * = student author under the direction of CMW
- IF = 5-year impact factor; median IF for nutrition/dietetics = 2.144 (source: ISI Web of Science)

- #C = number of citations (source: Google Scholar)
 - ASU = work originated by CMW at ASU
 - M-ASU = data analysis and/or manuscript preparation done at ASU
 - CA = CMW corresponding author
 - CMW's specific contributions are noted in parentheses
1. Fehrenbach KS*, **Wharton CM**. Consumer and producer information-sharing preferences at Arizona farmers' markets. In press (*J Ag Food Sys Comm Dev*). IF = Not Available as journal is too new; #C = 0; ASU (CMW co-directed all aspects of the project and manuscript preparation)

TEACHING

COURSES TAUGHT

NTR 300, Computer Applications in Nutrition (Spring 2008-current): A lecture course focused on teaching students practical use of internet and software technologies for nutrition communication, including website design, blog building and writing, podcast creation, and Microsoft Office products.

NTR 348, Cultural Aspects of Food (Summer 2008): A hybrid lecture/online course focused on exploring origins, development, and diversity of food preferences and dietary habits; food patterns and attitudes of global populations; and issues of food policy in the United States and abroad.

NTR 394, Perspectives on the Western Diet: Food, Health, and Sustainability (Fall 2011-current): A lecture course focused on examination of U.S. food guidance, the food system and food environment, the history of food and farm policy, food security, and aspects of sustainability in relation to food system impacts on the health of humans, society, and the environment.

NTR 598, Politics, Ethics, and the American Diet (Spring 2009-current): A graduate seminar exploring political and ethical issues inherent in the U.S. food system. Topics include food industry, government dietary recommendations and regulations, current issues in food politics, ethical questions of food choice, relation between the food system and sustainability issues, and investigation of how and why Americans eat the way they do.

SOS 536, Food System Sustainability (Fall 2010): Broad view of food systems and the sustainability of such systems. Concepts, theory, methods and empirical analyses from diverse disciplines, including agro-ecology, agronomy, political science, agricultural economics, geography, anthropology, and food and nutrition studies. Students choose a theme that is a core concern to food system sustainability and pursue that theme in diverse course activities and through engaging in the broader food system we are embedded in as residents in the Phoenix area. Culminates with a term paper/project that synthesizes experience and knowledge, providing a unique perspective on their role in food systems.
